Letter of Recommendation for Steam Turbine Services

I wish to acknowledge the high standard of performance, professionalism and commitment provided by Steam Turbine Services during our major turbine & generator outage in April/May 2014. This outage was an \$8.2 million dollar/thirty two day project which involved a complete rebuild of the low pressure, high pressure turbine and 205MW generator plus the exciter. This included installing a new low pressure turbine rotor and inner casing. Additionally, all of eight the steam valves and their actuators were rebuilt as well as the inspection of five bearings and several auxiliary systems.

Particularly noteworthy was the detailed attention and cooperative reactions provided in response to all of the difficult decision opportunities that arose. The experience and resources made available ensured us to complete a successful project.

As Outage Manager for this project I strongly recommend and endorse Steam Turbine Services for any turbine/generator work where technical expertise, analytical skills and consultant advice are required.

Sincerely,

Mel Sines
Team Leader & Outage Manager
